

WIND RESOURCE OF MEXICO & CENTRAL AMERICA

Mean Annual Wind Speed at 200m Resolution

Mean Annual Wind Speed at 80m (m/s)

This map depicts the approximate annual average wind speed over a 200 meter wide grid square at an 80-meter hub height. It was created by AWS Truepower using our advanced atmospheric models and historical weather data. This map is provided as a general indication of the wind resource, and is not intended for project design. For further information on project design and energy production services, please contact AWS Truepower.
